As an over the road truck driver, the services offered by XM satellite radio, allow me a better, more efficient way of making deliveries to major cities that are covered by their instant traffic and weather. By this I mean I can start checking on traffic and construction delays while 100 or more miles out thus giving me the option of choosing different routes to better expedite my trip. This XM option allows for a safer trip as I don't have to search for a local station while driving. XM satellite radio is something I gladly pay for and as such feel the NAB should stay out of. I would respectfully urge the FCC to reject NAB's petition 04-160. I strongly feel that local motorists will use local stations to get their local news, weather and sports as has been the case for many years. Thanks for your time.
